Hello everyone,

Thank you again for coming to visit PGST yesterday! I hope you found the visit informative and that will aid in the development of your problem statement.

I will ask around about Longhouse use cases.

- 1. I am attaching photos of the gas appliances around campus.
- 2. I am attaching our recent microgrid performance report for the first 6 months of the Clinic (new solar + batteries).
- 3. Equipment List (Total for Clinic Contract was \$379, 620- we also ended up upgrading the panels and ultimately installed a 66.5kW DC system.
- 4. SolarEdge System Data (old solar)

I have not taken pictures of the following yet:  
-Early Childhood Stove  
-Early Childhood Water Heater  
-Admin Kitchen Stove

For what it's worth, the average cost per Watt for the Wastewater Treatment Plant proposals was \$2.22 for system sizes of ~60-67 kW. Bids were submitted in Sept. 2025. Labor costs are increasing but solar panel efficiency is as well. Nonetheless, this cost per watt is on the lower end compared to residential projects because it is commercial (and no batteries).

| cost per Watt (DC) |
|--------------------|
| \$2.00             |
| \$2.05             |
| \$2.06             |
| \$2.76             |
| \$4.32             |
| \$1.87             |
| \$2.55             |

As always, reach out with any questions!

--
